Portfolio: <https://yagnik11.github.io/portfolio/>

PROFESSIONAL SUMMARY

Lead Backend Engineer with **5+ years** of experience building **AI-native SaaS** platforms, multi-tenant systems, and large-scale integrations. **Founding engineer at Cloudairy**, architecting agentic AI workflows, RAG systems, and enterprise-grade backend infrastructure serving 100k+ users.

Key Highlights:

- Founding Engineer at Cloudairy serving 100k+ users
- Built 20+ enterprise integrations
- Architected AI-native SaaS systems using GPT-4, Claude and Bedrock
- Designed distributed systems processing 10M+ events/day

CORE COMPETENCIES

Agentic AI & AI-Native Development: Claude Code CLI (agents, hooks, skills, plugins), multi-agent orchestration, autonomous pipelines, prompt engineering

AI & LLM Engineering: Fine-tuned LLMs (GPT, AWS Bedrock, Claude), prompt-to-flowchart, vector databases & RAG (Pinecone)

Backend & Cloud Architecture: Node.js, Python, Express, GraphQL, REST, WebSockets, PostgreSQL, MongoDB, Redis, Elasticsearch, Stripe

Infrastructure: Microservices, Kafka, BullMQ, FluentD, Grafana, Kibana, AWS, Azure, Nginx, Docker, Kubernetes, CI/CD

CRM & Marketing: HubSpot, Salesforce, Zapier, Customer.io, Google Analytics

Auth & SSO: Auth0, Okta, SAML2, OAuth2, Google Workspace, Ping Identity, Microsoft Entra, OneLogin, JumpCloud

Security & Scalability: JWT, RBAC, Multi-tenant isolation, High-throughput event processing (Kafka, Redis Streams)

WORK EXPERIENCE

Lead Backend Engineer

Cloudairy (AI-Powered Canvas Platform)

January 2024 – Present

Founding engineer architecting the AI backbone for a next-gen SaaS platform enabling natural language to workflow and diagram conversion. Adopted AI-native development practices using Claude Code CLI to accelerate delivery.

AI-Native Development & Agentic Workflows

- Adopted Claude Code CLI as primary development tool – using agents, hooks, skills, and CLAUDE.md project context to autonomously generate, refactor, and debug backend code, reducing development cycle time by ~40%.
- Leveraged agentic AI patterns (multi-step reasoning, tool use, autonomous task decomposition) to architect complex features with AI-assisted planning and implementation.
- Implemented AI-assisted code review workflows using Claude to catch architectural issues, security vulnerabilities, and performance bottlenecks before human review.

AI/LLM Systems & Automation

- Integrated AWS Bedrock (Claude, Llama 2) to enable natural language-to-flowchart conversion, reducing manual workflow design time by 65%.
- Implemented fine-tuned GPT-4 pipelines to generate multi-step user journeys from unstructured prompts, achieving 92% accuracy in workflow logic.
- Built RAG-based architecture with Pinecone vector embeddings to power dynamic AI recommendations for enterprise users.

Enterprise-Grade Backend

- Designed scalable logging infrastructure using Fluentd → Elasticsearch stack, real-time anomaly detection.
- Implemented Redis Queue-based task system handling background jobs (e.g., PDF report generation, AI batch processing).
- Architected multi-tenant RBAC with JWT claims isolation and SAML SSO (Okta/Auth0) for 100+ enterprise clients,

Critical Integrations

- Engineered Stripe + DataCap billing system with prorated subscriptions, webhook retries, and usage analytics
 - Engineered MS Teams/Slack deep integrations using OAuth2 and Webhooks to trigger workflows from chat commands (e.g., "/generate-flowchart").
-

Senior Backend Engineer

Gainserv (B2B Customer Intelligence Platform)

November 2022 – March 2024

Scaled data pipelines and analytics for a customer engagement tracking SaaS.

Data Infrastructure & Observability

- Deployed Fluentd + Loki + Grafana stack for centralized logging, reducing incident resolution time by 40%.
- Optimized Elasticsearch clusters for behavioral analytics, enabling 50+ segmentation filters with sub-second query response.
- Designed event deduplication pipelines handling 10M+ daily events with 99.99% data consistency. Introduced Redis-backed rate limiting that reduced API abuse incidents by 90% while maintaining 99.95% uptime SLA.

AI-Enhanced Analytics

- Developed LLM-powered survey insights to auto-generate executive summaries from 10K+ survey responses.
- Built anomaly detection to identify unusual user behavior patterns with 87% precision.

Integration Ecosystem

- Created HubSpot <> Salesforce bi-directional sync using Redis-backed idempotency keys, reducing CRM data conflicts by 75%.
 - Implemented Zapier webhook translator enabling non-technical users to create 120+ automation recipes.
-

Node.js Developer

Dharma Tech

June 2021 – October 2022

Delivered backend solutions for logistics and service-based projects.

- Built REST APIs (Express.js) for fleet management system, reducing delivery ETA miscalculations by 30%.
- Developed real-time dashboard with Socket.io and PostgreSQL to track 200+ field service agents.

Node.js and Python Developer

Rentech Digital

Jan 2021 – June 2021

Implemented backend systems for client projects across industries.

- Architected multi-vendor e-commerce APIs (Node.js + MongoDB) supporting 500+ concurrent checkouts.
- Automated daily financial reports using Python Pandas + CRON, saving 20+ manual hours/week.
- Designed JWT-based auth service with RBAC for internal admin portals across 5 client projects.

PERSONAL PROJECT

Autonomous AI Growth Engine (SEO SaaS Platform)

Solo Developer

2025 – Present

Building a fully autonomous AI-powered SEO SaaS platform — not a tool, but a self-operating AI employee that grows website traffic 24/7 with zero human input.

Agentic AI & Autonomous Pipelines / Architecture

- Designed a Turborepo monorepo with 7 pillars and 40 modules. Backend: Express.js + PostgreSQL + Redis (BullMQ) with 9-stage autonomous pipeline. Frontend: Next.js 14 with App Router, React Query, Tailwind CSS.

- Built entirely using Claude Code CLI with agents, hooks, skills, and CLAUDE.md project context — demonstrating AI-native full-stack development at scale.
- Multi-agent pipeline architecture where each BullMQ worker autonomously handles a stage of SEO analysis (competitor discovery, keyword scoring, content gap analysis) with zero human intervention.
- Integrated OpenAI for niche detection, DataForSEO API for market data, and Google Search Console for real-time ranking signals.
- Designed a self-improving rediscovery pipeline that autonomously identifies new keyword opportunities based on previous analysis cycles.
- Plain JavaScript everywhere (no TypeScript) — optimized for AI-assisted development speed. Raw SQL with pg-promise, BullMQ job queues, custom migration runner.

EDUCATION

LDRP Institute of Technology & Research, Gujarat Technological University

Bachelor of Engineering - BE, Computer Science

CERTIFICATES

AWS Essential Training for Developers – July 2022

Migrating to AWS – July 2022
